Background Information

MTCO2, also named as COII, COXII, and COX2, belongs to the cytochrome c oxidase subunit 2 family. It is the component of the respiratory chain that catalyzes the reduction of oxygen to water. Subunits 1-3 form the functional core of the enzyme complex. Subunit 2 transfers the electrons from cytochrome c via its binuclear copper A center to the bimetallic center of the catalytic subunit 1. Defects in COX2 are a cause of mitochondrial complex IV deficiency (MT-C4D).

Selected Validation Data

WB result of MTCO2 antibody (MTCO2; 1:1000; incubated at room temperature for 1.5 hours) with 143B and 143B.TK.p0 cell. 143B is wild-type cell line, 143B.TK.p0 is mtDNA deletion cell line. This data was developed using the same antibody clone with 68527-1-PBS in a different storage buffer formulation.

Various lysates were subjected to SDS PAGE followed by western blot with 68527-1-1g (MTCO2 antibody) at dilution of 1:10000 incubated at room temperature for 1.5 hours. This data was developed using the same antibody clone with 68527-1-PBS in a different storage buffer formulation.
