## **Background Information**

Integrins are cell adhesion receptors that are heterodimers composed of non-covalently associated alpha and beta subunits. Integrin alpha~5~(ITGA5), belongs~to~the~integrin~alpha~chain~family, primarily~binds~to~Integrin~beta~1~chain~family~the family~the family~th(ITGB1) to form an α5β1 heterodimer (PMID: 33711961). Integrin α5β1 is a specific receptor of fibronectin through its arginine-glycine-aspartic acid (RGD) binding site (PMID: 19608542). Integrin α5β1 plays roles in cell adhesion, migration and matrix formation, and has emerged as an essential mediator in many human carcinomas (PMID: 33408483).
