## Background Information

AP1M1, also named as CLTNM, Mu-adaptin 1 and Clathrin coat assembly protein AP47, belongs to the adaptor complexes medium subunit family. It is a subunit of clathrin-associated adaptor protein complex 1 that plays a role in protein sorting in the trans-Golgi network (TGN) and endosomes. The AP complexes mediate the recruitment of clathrin to membranes and the recognition of sorting signals within the cytosolic tails of transmembrane cargo molecules.
