Background Information	SHBG (sex hormone-binding globulin), also known as androgen-binding protein (ABP), is the specific transport protein for sex steroid hormones in humans. SHBG is synthesized mainly by the liver and circulates in the blood, in form of homodimer with a single steroid-binding site per dimer. In addition to the plasma SHBG, a testis isoform expressed by Sortoli cells also exists due to the gene alternative splicing. Various bands (44-56 kDa) recognized by this antibody may represent variably glycosylated or different isoforms of SHBG.

Selected Validation Data

Lo The second se

human placenta tissue were subjected to SDS PAGE followed by western blot with 83096-1-RR (SHBG antibody) at dilution of 1:1000 incubated at room temperature for 1.5 hours. 1x10^6 HeLa cells were intracellularly stained with 0.25 ug SHBG Recombinant antibody (83096-1-RR, Clone:230356F10) and CoraLite®488-Conjugated Goat Anti-Rabbit JgC(H+L) (SA00013-2)(red), or 0.25 ug Isotype Control (blue). Cells were fixed with 4% PFA and permeabilized with Flow Cytometry Perm Buffer (PF00011-C).

Biolayer interferometry (BLI) kinetic assays of 83096-1-RR against Human SHBG were performed. The affinity constant is 0.38 nM.
