## **Background Information**

CRNKL1 (Crooked Neck Pre-MRNA Splicing Factor 1) is involved in pre-mRNA splicing process. As a component of the minor spliceosome, it's involved in the splicing of U12-type introns in pre-mRNAs. It's reported that CRNKL1 is a nuclear retention factor of the HIV-1 unspliced RNA and a selective regulator of cytoplasmic levels of a subset of intron-retaining cellular mRNAs.(PMID: 33468685)
