Background Information

The P2 receptors have two subfamilies in mammalian cells, P2X and P2Y. P2X family of ligand-gated ion channel receptors have seven members, P2RX1-7, which all constitute non-selective cation channels proposed to be functional under a homo- or heterotrimeric association. P2RX6 is predominantly expressed in skeletal muscle, and regulated by p53. It's reported that ATP might increase renal cell carcinoma cells migration and invasion through P2RX6.(PMID: 31159832, PMID:9242461)

Selected Validation Data

mouse skeletal muscle tissue were subjected to SDS PAGE followed by western blot with 84458-4-RR (P2RX6 antibody) at dilution of 1:4000 incubated at room temperature for 1.5 hours. This data was developed using the same antibody clone with 84458-4-PBS in a different storage buffer formulation.

Biolayer interferometry (BLI) kinetic assays of 84458-4-RR against Human P2RX6 were performed. The affinity constant is below 1 pM.
