Background Information

HNRNPR belongs to Heterogeneous nuclear ribonucleoproteins (hnRNPs), which are among the most abundant proteins in the eukaryotic nucleus and they play important roles in processing of precursor mRNA. hnRNP proteins have a modular structure consisting of one or more RNA binding domains and at least another auxiliary domain, which likely mediates protein-protein interactions but may also contribute to nucleic acid binding. The calculated molecular weight of HNRNPR is 71 kDa, but the migration behavior of the 82 kDa translation product was indistinguishable from that of HNRNPR. (PMID: 9421497)

Selected Validation Data

Various lysates were subjected to SDS PAGE followed by western blot with 85078-5-RR (HNRNPR antibody) at dilution of 1:10000 incubated at room temperature for 1.5 hours. This data was developed using the same antibody clone with 85078-5-PBS in a different storage buffer formulation.

Biolayer interferometry (BLI) kinetic assays of 85078-5-RR against Human HNRNPR were performed. The affinity constant is 0.868 nM.
