Background Information

Bile salt-activated lipase, previously named cholesterol esterase or bile salt-stimulated (or dependent) lipase, is a 74 kDa lipolytic enzyme capable of hydrolyzing cholesteryl esters, tri-, di-, and mono-acylglycerols, phospholipids, lysophospholipids, and ceramide (PMID:12454261). The same enzyme is present as a major protein in milk and as a minor constituent in liver, activated macrophages, and endothelial cells (PMID:11733511). Defects in CEL are a cause of maturity-onset diabetes of the young type 8 with exocrine dysfunction (MODY8) (PMID:16369531). The full length protein has 11 glycosylation sites. It has 2 isoforms produced by alternative splicing.

Selected Validation Data

Various lysates were subjected to SDS PAGE followed by western blot with 85081-4-RR (CEL antibody) at dilution of 1:10000 incubated at room temperature for 1.5 hours. This data was developed using the same antibody clone with 85081-4-PBS in a different storage buffer formulation.

Biolayer interferometry (BLI) kinetic assays of 85081-4-RR against Human CEL were performed. The affinity constant is 2.46 nM.
