CTF1 (Cardiotrophin-1) is a member of the interleukin-6 (IL-6) family of cytokines. It is a secreted protein that induces cardiac myocyte hypertrophy in vitro and has been shown to bind and activate the IL-6ST/gp130 receptor. CTF1 plays a crucial role in various physiological and pathological processes, including cardiac function, metabolism, and cancer progression.

## Selected Validation Data

Various lysates were subjected to SDS PAGE followed by western blot with 85828-4-RR (Ctf1 antibody) at dilution of 1:1000 incubated at room temperature for 1.5 hours. This data was developed using the same antibody clone with 85828-4-PBS in a different storage buffer formulation.
