Background Information

CCL11 also named Eotaxin-1, was initially discovered as an eosinophil-specific chemoattractant. CCL11 plays a central role in both allergic and non-allergic inflammatory reactions by recruiting immune cells such as eosinophils, basophils and Th2 lymphocytes. CCL11 binds to the chemokine receptors CCR2, CCR3 and CCR5, with highest affinity to CCR3. High levels of CCL11 have been described in several chronic inflammatory diseases, such as allergic rhinitis, atopic dermatitis, asthma, gastrointestinal disease and rheumatoid arthritis.

Selected Validation Data

HEK-293 cells transfected with mouse CCL11 were subjected to SDS PAGE followed by western blot with 86339-3-RR (Ccl11 antibody) at dilution of 1:5000 incubated at room temperature for 1.5 hours.

Biolayer interferometry (BLI) kinetic assays of 86339-3-RR against Mouse CCL11/Eotaxin were performed. The affinity constant is 0.23 nM.
