Background Information

SERPINA7, also known as Thyroxine-binding globulin (TBG), is a 54 kDa acidic glycoprotein, consisting of a single polypeptide chain of 395 amino acids and four oligosaccharide chains. It is one of the major serum transport proteins of thyroid hormones (THs). Although high amounts of albumin are found in serum, TBG has a greater affinity for thyroxine (T4). Mutations in this gene result in TGB deficiency, which has been classified as partial deficiency, complete deficiency, and excess, based on the level of serum TBG.

Selected Validation Data

Various lysates were subjected to SDS PAGE followed by western blot with 86893-4-RR (SERPINA 7 antibody) at dilution of 1:3000 incubated at room temperature for 1.5 hours. This data was developed using the same antibody clone with 86893-4-PBS in a different storage buffer formulation.

IP result of anti-SERPINA7 (IP:86893-4-RR, 4 μ g; Detection:86893-4-RR 1:600) with HepG2 cells lysate 1400 μ g. This data was developed using the same antibody clone with 86893-4-PBS in a different storage buffer formulation.

Bi-layer interferometry (BLI) kinetic assays of 86893-4-RR against Human SERPINA 7 were performed. The affinity constant is below 1 pM.
