Background Information

DTD1 (D-aminoacyl-tRNA deacylase 1) is a crucial enzyme that ensures the fidelity of protein synthesis by maintaining L-homochirality. It functions as a proofreading factor that hydrolyzes mischarged D-aminoacyl-tRNAs into free D-amino acids and tRNA molecules, preventing the incorporation of D-amino acids into polypeptide chains. DTD1 also plays a significant part in the initiation of DNA replication by facilitating the loading of the CDC45 complex onto pre-replication sites. (PMID: 18700836;27200345)

Selected Validation Data

Various lysates were subjected to SDS PAGE followed by western blot with 87297-1-RR (DTD1 antibody) at dilution of 1:10000 incubated at room temperature for 1.5 hours. This data was developed using the same antibody clone with 87297-1-PBS in a different storage buffer formulation.

Immunofluorescent analysis of (4% PFA) fixed Jurkat cells using DTD1 antibody (87297-1-RR, Clone: 252568A10) at dilution of 1:200 and CoraLite® 488-Conjugated Goat Anti-Rabbit IgG(H+L) (SA00013-2). This data was developed using the same antibody clone with 87297-1-PBS in a different storage buffer formulation.
