Background Information

PTPRJ, also named as CD148 and DEP1, belongs to the protein-tyrosine phosphatase family and Receptor class 3 subfamily. PTPs are known to be signaling molecules that regulate a variety of cellular processes including cell growth, differentiation, mitotic cycle, and oncogenic transformation. PTPRJ may contribute to the mechanism of contact inhibition of cell growth. PTPRJ is present in all hematopoietic lineages, and was shown to negatively regulate T cell receptor signaling possibly through interfering with the phosphorylation of Phospholipase C Gamma 1 (PLCG1) and Linker for Activation of T Cells (LAT). It was also found to dephosphorylate PDGF beta receptor, and may be involved in UV-induced signal transduction.

Selected Validation Data

HeLa cells were subjected to SDS PAGE followed by western blot with 87321-1-RR (DEP-1/CD148 antibody) at dilution of 1:20000 incubated at room temperature for 1.5 hours. This data was developed using the same antibody clone with 87321-1-PBS in a different storage buffer formulation.

Various lysates were subjected to SDS PAGE followed by western blot with 87321-1-RR (DEP-1/CD148 antibody) at dilution of 1:20000 incubated at room temperature for 1.5 hours. This data was developed using the same antibody clone with 87321-1-PBS in a different storage buffer formulation.

Biolayer interferometry (BLI) kinetic assays of 87321-1-RR against Human PTPRJ were performed. The affinity constant is 3.21 nM.
