## Background Information

RAB25 (RAB25, member RAS oncogene family), also known as RAB11C or CATX-8, is a small GTPase belonging to the RAS superfamily of proteins. RAB25 is a key regulator of receptor recycling and polarized vesicular trafficking in epithelial cells. Unlike many RAB proteins, RAB25 expression is predominantly restricted to epithelial tissues and is frequently dysregulated in carcinomas. It functions as a critical determinant of cellular fate through its context-dependent roles in modulating major signaling pathways, including integrin recycling, growth factor receptor trafficking (e.g., EGFR, IGF1R), and autophagy.

## Selected Validation Data

HT-29 cells were subjected to SDS PAGE followed by western blot with 87453-1-RR (RAB25 antibody) at dilution of 1:10000 incubated at room temperature for 1.5 hours.

Biolayer interferometry (BLI) kinetic assays of 87453-1-RR against Human RAB25 were performed. The affinity constant is 7.07 nM.
