Background Information

Complement C1q-like protein 2 (C1QL2, also known as CTRP10) is a member of the C1q-like protein family. It is a secreted protein that plays a role in synaptic organization and function. C1QL2 is involved in the formation and maintenance of synapses, particularly in the central nervous system (CNS) (PMID: 20646056). It interacts with specific neurexin-3 isoforms to recruit synaptic vesicles and modulate synaptic transmission. Additionally, C1QL2 has been implicated in the regulation of hippocampal mossy fiber-CA3 synapse function, suggesting its role in synaptic plasticity and memory formation (PMID: 28219683).

Selected Validation Data

Various lysates were subjected to SDS PAGE followed by western blot with 87797-1-RR (C1QL2 antibody) at dilution of 1:5000 incubated at room temperature for 1.5 hours. This data was developed using the same antibody clone with 87797-1-PBS in a different storage buffer formulation.

Immunofluorescent analysis of (-20°C Methanol) fixed HeLa cells using C1QL2 antibody (87797-1-RR, Clone: 253329D5) at dilution of 1:400 and CoraLite® 488-Conjugated Goat Anti-Rabbit IgG(H+L) (SA00013-2). This data was developed using the same antibody clone with 87797-1-PBS in a different storage buffer formulation.
