Background Information

Inducible T cell co-stimulator (ICOS) is related to the CD28 superfamily and is highly expressed on activated T cells as well as regulatory T cells and is crucial for the survival and function of T cells, Th2 cell differentiation, and lung inflammatory responses. Binding ICOS to ICOS-ligand (ICOS-L) activates a cascade of intracellular signaling molecules that prevent apoptosis and lead to the production of cytokines such as IL-4 and IL-13.

Selected Validation Data

1x10⁶ untreated or anti-CD3/CD28 treated BALB/c spleen cells were surface stained with 0.25 ug Anti-Mouse ICOS/CD278 Rabbit RecAb (98341-1-RR, Clone: 242639C3) and PE-Conjugated Goat Anti-Rabbit IgG(H+L). Cells were then stained with CoraLite® Plus 488 Anti-Mouse CD3. Cells were not fixed. This data was developed using the same antibody clone with 98341-1-PBS in a different storage buffer formulation.
