Background Information

L1CAM, also known as NCAM-L1 or CD171, is a cell adhesion molecule of the immunoglobulin superfamily. It is a 200-220 kDa transmembrane glycoprotein composed of six Ig-like domains and five fibronectin type III repeats followed by a transmembrane region and a highly conserved cytoplasmic tail (PMID: 3412448; 22796939). L1CAM is primarily expressed in the nervous system and is involved in neuron-neuron adhesion, neurite fasciculation, outgrowth of neurites, cerebellar granule cell migration, neurite outgrowth on Schwann cells and interactions among epithelial cells of intestinal crypts (PMID: 3412448; 10767310). L1CAM is overexpressed in many human cancers and is often associated with bad prognosis (PMID: 27267927; 26111503).

Selected Validation Data

1x10⁶ HEK-293T cells (left) or L1CAM/CD171 transfected HEK-293T (right) cells were surface stained with 0.25 ug Anti-Mouse L1CAM/CD171 Rabbit RecAb (98510-1-RR, Clone: 250101F8) and PE-Conjugated Goat Anti-Rabbit IgG(H+L). Cells were not fixed.
