Background Information

Integrin beta-5 (ITGB5) is expected to be located in the plasma membrane and mitochondria, which is ubiquitinated in placenta and gall bladder. ITGB5 is a member of integrins and was proved to be associated with pathological processes in several tumors (PMID: 34966851). It is reported that TGB5 is highly expressed in hepatocellular carcinoma (HCC), and miR-185 regulates the expression of β- catenin through the ITGB5-dependent manner and affects the proliferation and migration of HCC cells (PMID: 35223869).
