Background Information

Programmed cell death ligand 1 (PD-L1, CD274, or B7-H1), is the first member of B7 family to be discovered. B7 family molecules are type I transmembrane proteins belonging to the immunoglobulin superfamily. In concert with their CD28 family receptors, the B7s are key regulators of the adaptive immune response. PD-L1 is suggested as a negative regulator of T and B cell, and plays important role in mediating tolerance of lymphocytes to self-antigens. It is also involved in the costimulatory signal, essential for T-cell proliferation and production of IL10 and IFNG, in an IL2-dependent and a PD-1-independent manner.

Selected Validation Data

1X10⁶ unstimulated or anti-CD3/CD28 stimulated (2 days) BALB/C mouse splenocytes were surface stained with 0.1 ug APC Anti-Mouse CD274 (PD-L1, B7-H1) (10F.9G2) (APC-65073, Clone:10F.9G2). Cells were not fixed.
