Background Information

Foxp3 (forkhead box P3), also named as IPEX, JM2 and scurf, is a member of the forkhead transcription factor family and is essential for normal immune homeostasis (PMID: 11138001; 20429413). Foxp3 is specifically expressed in CD4+ CD25+ regulatory T cells and is crucial for their development and suppressive activity (PMID: 12612578; 12612581). In scurf mouse, disruption of Foxp3 results in the fatal lymphoproliferative disorder attributed to the lack of an immune-suppressive component in the immune system (PMID: 25683611; 11138001). Similar to mice, genetic defects in human Foxp3 are the cause of immunodeficiency polyendocrinopathy, enteropathy, X-linked syndrome (IPEX) which also known as X-linked autoimmunity-immunodeficiency syndrome (PMID: 11137993).

Selected Validation Data

1X10⁶ BALB/c mouse splenocytes were surface stained with PE Anti-Mouse CD4 (GK1.5) and then fixed and permeabilized with True-Nuclear Transcription Factor Buffer Set. Cells were then intracellularly stained with 0.06 ug APC Anti-Mouse Foxp3 (APC-65089, Clone:3G3) or 0.06 ug APC Mouse IgG1 Isotype Control (MOPC-21). It is recommended that the antibody dosage should not exceed 0.06ug.
