			Reconstitution and Storage	Reconstitution: Reconstitute at 0.25 μg/μl in 200 μl sterile water for short-term storage. After reconstitution with sterile water, if glycerol has no effect on subsequent experiments, it is recommended to add an equal volume of glycerol for long-term storage (see Stability and Storage for more details). If a different concentration is needed for your purposes please adjust the reconstitution volume as required (please note: the ion concentration of the final solution will vary according to the volume used). Note: Centrifuge vial before opening. When reconstituting, gently pipet and wash down the sides of the vial to ensure full recovery of the protein into solution.
	Formulation	The protein was expressed as GST-tagged fusion protein by E.Coli and purified by Glutathione-sepharose. The purified protein was resolved in PBS (58mM Na2HPO4, 17mM NaH2PO4, 68mM NaCl, pH7.4) added with 15% glycerol. The elution buffer contain 100mM GSH.		
Stability and Storage	Aliquot and store at -20°C to -80°C for up to 6 months. Avoid freeze thaw cycles.
