Background Information

The transgelin family is a group of proteins that belong to 22 kDa actin-related corpnin superfamily. Of all three isoforms, transgelin 1 is the best characterized. Transgelin 1, also known as SM22 alpha, is a specific marker for differentiated smooth muscle cells. Transgelin 2, also known as SM22 beta, is expressed by both smooth muscle and non-smooth muscle cells in a temporally and spatially regulated pattern. Trangenlin 3, also known as NP25, is only found in highly differentiated neuronal cells. This antibody can bind transgelin 2 specifically, but not transgelin 1 or 3.

Selected Validation Data

1X10⁶ HepG2 cells were intracellularly stained with 0.4 μ g CoraLite® Plus 488 Anti-Human Transgelin-2-specific (CL488-15508) (red), or 0.4 μ g Control Antibody. Cells were fixed with 4% PFA and permeabilized with Flow Cytometry Perm Buffer (PF00011-C).

Immunofluorescent analysis of (-20°C Ethanol) fixed HepG2 cells using CoraLite® Plus 488 Transgelin-2-specific antibody (CL488-15508) at dilution of 1:200.
