## **Background Information**

LETM1 is a mitochondrial inner membrane protein. It functions to maintain the mitochondrial tubular shapes and is  $required for normal \ mitochondrial \ morphology \ and \ cellular \ viability. \ It \ served \ as \ an \ anchor \ protein \ for \ complex$ formation between mitochondria and ribosome, and regulated mitochondrial biogenesis. It was also identified inWolf-Hirschhorn syndrome, and was deleted in nearly all patients with the syndrome. A recent study determined that adenovirus-mediated LETM1 may provide a useful target for designing lung tumor prevention and treatment.
