Background Information

CD5 molecule-like (CD5L), also known as apoptosis inhibitor expressed by macrophages (AIM), SP-alpha, apoptosis inhibitor 6 (API6), is a member of the scavenger receptor cysteine-rich (SRCR) family of proteins (PMID: 9045627; 9892623). CD5L is a soluble protein mainly secreted mostly by macrophages in lymphoid and inflamed tissues $(PMID: 15009805). It contains three SRCR domains, each approximately \ 100 \ amino \ acids \ in length \ with \ sialic \ acid \ acid$ $content\ at\ a\ potential\ region\ of\ O-linked\ glycosylation\ between\ SRCR\ domains\ 1\ and\ 2.\ CD5L\ is\ involved\ in\ different$ processes such as metabolism, infection and autophagy (PMID: 33920819).
