**Background Information** 

CEP164, also named as KIAA1052 or NPHP15, is a 1460 amino acid protein, which contains 1 WW domain. CEP164 localizes in the microtubule organizing center and is expressed in several cell lines. CEP164 plays a role in microtubule organization and/or maintenance for the formation of primary cilia, a microtubule-based structure that protrudes from the surface of epithelial cells. CEP164 plays a critical role in G2/M checkpoint and nuclear divisions. The expression of CEP164 is normally limited to the mother centriole, and CEP164 can be used as a useful marker for mother centriole.
