For Research Use Only

CoraLite® Plus 488-conjugated Moesin Polyclonal antibody

Catalog Number: CL488-26053

Featured Product

Basic Information

Catalog Number: GenBank Accession Number:

CL488-26053 BC017293 GeneID (NCBI):

100ul, Concentration: 1000 ug/ml by 4478 Nanodrop:

UNIPROT ID: P26038 Rabbit Full Name:

Isotype: moesin

IgG Calculated MW: Immunogen Catalog Number: 577 aa, 68 kDa AG23531 Observed MW: 68-70 kDa

Purification Method: Antigen affinity purification Recommended Dilutions:

Excitation/Emission maxima

wavelengths: 493 nm / 522 nm

IF/ICC 1:50-1:500

Applications

Tested Applications:

IF/ICC

Species Specificity: human, mouse, rat

Positive Controls:

IF/ICC: HepG2 cells,

Background Information

Moesin belongs to the ezrin-radixin-moesin (ERM) family of proteins which act as cross-linkers between membrane and actin cytoskeleton. ERM proteins provide structural links to strengthen the cell cortex and facilitate several key cellular processes, including membrane dynamics, substrate adhesion, cell survival, cell adhesion, and motility. The function of ERM proteins is highly reliant on phosphorylation induced conformational changes in response to growth factor, chemokine, and antigen stimulation. This antibody may cross-react with ezrin or radixin with molecular weights around 68-70 kDa.

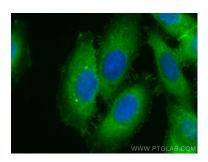

Storage

Store at -20°C. Avoid exposure to light. Stable for one year after shipment.

PBS with 50% Glycerol, 0.05% Proclin300, 0.5% BSA, pH 7.3.

Aliquoting is unnecessary for -20°C storage

Selected Validation Data

Immunofluorescent analysis of (-20°C Methanol) fixed HepG2 cells using CoraLite® Plus 488 Moesin antibody (CL488-26053) at dilution of 1:200.
