Background Information

ITGA3, also named as MSK18, CD49c, GAPB3 and FRP-2, belongs to the integrin alpha chain family. It is a receptor for $fibronectin, laminin, collagen, epiligrin, thrombospondin and {\it CSPG4}. ITGA3\ may\ mediate\ with\ LGALS3\ the$ stimulation by CSPG4 of endothelial cells migration. ITGA3 is highly concentrated in epithelial cells where it strongly adheres to Laminin-5 and Laminin-5 induced rapid adhesion can be blocked by antibodies against the alpha-3 integrin subunit. It can be cleaved into heavy chain (840aa) and light chain (176aa). This antibody can recognize the heavy chain.
