Background Information

USP5, also named as ISOT, belongs to the peptidase C19 family. Knock-down of USP5 causes the accumulation of $TP53/p53\ and\ an\ increase\ in\ TP53/p53\ transcriptional\ activity\ because\ the\ unanchored\ polyubiquitin\ that$ accumulates is able to compete with ubiquitinated TP53/p53 but not with MDM2 for proteasomal recognition. USP5 is a potential target for p53 activating therapeutic agents for the treatment of cancer(PMID: 19098288). It is a novel proteasome associated protein(PMID: 19182904). USP5 cleaves linear and branched multiubiquitin polymers with a marked preference for branched polymers.
