Background Information

L2HGDH(L-2-hydroxyglutarate dehydrogenase, mitochondrial) is also named as duranin, C14orf160 and belongs to the L2HGDH family. The putative L2HGDH is predicted to be targeted to the mitochondria where its mitochondrial targeting sequence is presumably removed(PMID:16005139). Defects in L2HGDH are the cause of L-2-hydroxyglutaric aciduria (L2HGA). It has 2 isoforms produced by alternative splicing with the molecular weight of 50 kDa and 48 kDa. L2HGDH also can be detected as ~45kD due to the 51aa transit peptide cleaved.
