## **Background Information**

BLNK (also known as SLP-65 or BASH) is an important adaptor protein selectively expressed in B-lineage cells. BLNK bridges B cell receptor-associated kinase activation with downstream signaling pathways, thereby affecting various biological functions. BLNK has been shown to be necessary for BCR-mediated Ca2+ mobilization, for the activation of mitogen-activated protein kinases such as ERK, JNK, and p38 in a chicken B cell line DT40, and for activation of transcription factors such as NF-AT and NF-kB in human or mouse B cells. BLNK plays a crucial role in pre-BCRdependent progression of B cell development, BCR-mediated B cell survival, activation, proliferation, and Tindependent immune responses.

Storage

## Selected Validation Data

1X10^6 Daudi cells were intracellularly stained with 0.4 ug CoraLite® Plus 488 Anti-Human BLNK (CL488-66953, Clone:1A1A1) (red), or 0.4 ug Control Antibody. Cells were fixed with 4% PFA and permeabilized with Flow Cytometry Perm Buffer (PF00011-C).
