Background Information

 ${\bf TIMELESS1} \ ({\bf TIM1}) \ gene \ encodes \ protein \ timeless \ homolog \ belonging \ to \ timeless \ family. \ TIM1 \ is \ localized \ in$ nucleus and regulated by cell cycle. It expresses high levels in S, G2 and M phases, and low in G0 and G1 phases. TIM1 is involved in the circadian rhythm autoregulatory loop and is a crucial component of the circadian core oscillator, which includes the CRY proteins, CLOCK, NPAS2, etc. It is also involved in cell survival after DNA damage or replication stress and reported to play important role in epithelial cell morphogenesis and formation of branching tubules.

Selected Validation Data

1X10^6 HEK-293 cells were intracellularly stained with 0.8 ug CoraLite® Plus 488 Anti-Human TIMELESS (CL488-67022, Clone:186G3) (red), or 0.8 ug Control Antibody. Cells were fixed and permeabilized with Transcription Factor Staining Buffer Kit (PF00011).
