## **Background Information**

 $PRC1 (protein \ regulator \ of \ cytokines is \ 1) \ is \ a \ microtubule-bundling \ protein \ that \ is \ involved \ in \ cytokines is.$  Depletion of PRC1 leads to failed cytokinesis. PRC1 is located in the nucleus during interphase, and becomes associated with mitotic spindles in a highly dynamic manner during mitosis, and localizes to the cell mid-body during cytokinesis. PRC1 is a substrate of CDK1 and it was assumed that CDK1 phosphorylation blocks its activity during metaphase. Three isoforms of PRC1 exist due to the alternative splicing, with predictive molecular weight of  $71.6\,\mathrm{kDa}$ ,  $70.2\,\mathrm{kDa}$ and 66.2 kDa, respectively. The dual bands between 66-72 kDa detected by this antibody may represent different forms of PRC 1.
