For Research Use Only

CoraLite®594-conjugated YAP1 Monoclonal antibody

Catalog Number:CL594-66900 1 Publications

Basic Information

Catalog Number: GenBank Accession Number:

CL594-66900 BC038235 GeneID (NCBI):

100ul, Concentration: 1000 ug/ml by 10413 Nanodrop: **UNIPROT ID:**

P46937 Mouse Full Name:

Isotype: Yes-associated protein 1, 65kDa

lgG1 Calculated MW: 504 aa, 54 kDa

Immunogen Catalog Number:

AG28194

Purification Method: Protein G purification

CloneNo.: 3A7A9

Recommended Dilutions: IF/ICC 1:50-1:500

Excitation/Emission maxima

wavelengths: 588 nm / 604 nm

Applications

Tested Applications:

Cited Applications:

Species Specificity: human, mouse, rat Cited Species: human

Positive Controls:

IF/ICC: HepG2 cells,

Background Information

Yes-associated protein 1 (YAP1) is a transcriptional regulator which can act both as a coactivator and a corepressor and is the critical downstream regulatory target in the Hippo signaling pathway that plays a pivotal role in organ size control and tumor suppression by restricting proliferation and promoting apoptosis. The core of this pathway is composed of a kinase cascade wherein STK3/MST2 and STK4/MST1, in complex with its regulatory protein SAV1, phosphorylates and activates LATS1/2 in complex with its regulatory protein MOB1, which in turn phosphorylates and inactivates YAP1 oncoprotein and WWTR1/TAZ. Plays a key role to control cell proliferation in response to cell $contact.\ Phosphorylation\ of\ YAP1\ by\ LATS1/2\ inhibits\ its\ translocation\ into\ the\ nucleus\ to\ regulate\ cellular\ genes$ important for cell proliferation, cell death, and cell migration. The presence of TEAD transcription factors are required for it to stimulate gene expression, cell growth, anchorage-independent growth, and epithelial mesenchymal transition (EMT) induction. Isoform 2 and isoform 3 can activate the C-terminal fragment (CTF) of ERBB4 (isoform 3). Increased expression seen in some liver and prostate cancers. Isoforms lacking the transactivation domain found in striatal neurons of patients with Huntington disease (at protein level). It is actived by phosphorylation and degradated by ubiquitination (20048001). The calcualted molecular weight of YAP1 is 54 and the calculation of the calculakDa, but routinely observed at 65-75 kDa by Western Blot (PMID: 28230103, 33264286, 36255405).

Storage

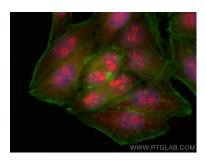

Storage:

Store at -20°C. Avoid exposure to light. Stable for one year after shipment.

PBS with 50% Glycerol, 0.05% Proclin300, 0.5% BSA, pH 7.3.

Aliquoting is unnecessary for -20°C storage

Selected Validation Data

Immunofluorescent analysis of (4% PFA) fixed HepG2 cells using Coralite®594 YAP1 antibody (CL594-66900, Clone: 3A7A9) at dilution of 1:200, CL488-phalloidin (green).
