For Research Use Only

CoraLite®594-conjugated PNPLA3 Monoclonal antibody

Catalog Number: CL594-67369

| Catalog Number: CL594-67369 | GenBank Accession Number: BC065195 | Purification Method: Protein G purification |
|--|--|---|
| Size: | GenelD (NCBI): | CloneNo.: 1D2B11 |
| Nanodrop; | UNIPROT ID: Q9NST1 Full Name: patatin-like phospholipase domain containing 3 Observed MW: 53 kDa | Recommended Dilutions: IF/ICC 1:50-1:500 Excitation/Emission maxima wavelengths: 588 nm / 604 nm |
| Source: Mouse | | |
| lsotype: lgG1 | | |
| Immunogen Catalog Number: AG27407 | | |
| Tested Applications: | Positive Controls: IF/ICC : HeLa cells, | |
| Species Specificity: Human, Rat | | |
| PNPLA3 belongs to a family of proteins that share a domain that was first identified in patatin, a major soluble protein of potato tubers with nonspecific acyl hydrolase activity. The domain differs from classical lipases by employing a catalytic dyad (Ser-Asp), rather than a catalytic triad, to effect hydrolysis. PNPLA3 is expressed primarily in liver and adipose tissue, in which it partitions to membranes and lipid droplets. Real-time PCR of cDN from human tissues indicated that PNPLA3 expression was highest in the liver, followed by skin and adipose tissue PNPLA3 is expressed at the highest levels in adipose tissue of mice. The PNPLA3 protein was expected at 50-70 kD as observed; the additional band at approximately 130-150 kDa is a oligomer bands. (PMID: 20385813, PMID: 24931521, PMID: 23023705) | | |
| Storage: Store at -20°C. Avoid exposure to ligh Storage Buffer: | t. Stable for one year after shipment. | |
