Background Information

Asialoglycoprotein receptor (ASGPR), also known as the hepatic galactose/N-acetylglucosamine (GlcNAc) receptor or Ashwell receptor, is a C-type lectin expressed exclusively in hepatic parenchymal cells. ASGPR consists of two subunits, a major subunit (ASGR1, HL-1) and a minor subunit (ASGR2, HL-2), and specifically recognizes terminal βlinked galactose or GlcNAc on circulating glycoproteins or cells. This receptor plays a critical role in serum $gly coprote in homeostasis\ by\ mediating\ the\ endocytosis\ and\ lysosomal\ degradation\ of\ gly coprote ins\ that\ contain$ terminal galactose or GlcNAc residues. ASGPR may facilitate hepatic infection by multiple viruses including hepatitis B, and is also a target for liver-specific drug delivery.

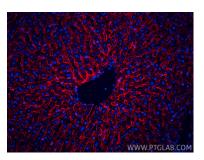

Storage

Aliquoting is unnecessary for -20°C storage

Selected Validation Data

Immunofluorescent analysis of (4% PFA) fixed paraffin-embedded rat liver tissue using CoraLite®594 ASGR1 antibody (CL594-83691-3, Clone: 240672C4) at dilution of 1:200. Heat mediated antigen retrieval with Tris-EDTA buffer (pH 9.0).
