Background Information

DDX18 (DEAD-box helicase 18) is a protein belonging to the DEAD-box deconjugating enzyme family that is widely involved in RNA metabolism. It plays a key role in the assembly of the ribosomal small subunit (SSU) and ensures efficient intracellular protein synthesis. DDX18 unwinds RNA double strands through its deconjugating enzyme activity, which is essential for the proper processing and functional execution of RNA molecules. In addition, DDX18 is a multifunctional RNA deconjugating enzyme involved in a variety of signaling pathways, playing a key role not only in ribosome assembly and RNA metabolism, but also in the regulation of a variety of biological processes such as cell cycle, genome stability and stem cell pluripotency.
