Background Information	Jagged1 (JAG1), also known as CD339, is a type I, membrane-anchored, multi-domain protein and a ligand of the Notch receptor (PMID: 15358557). Jagged1 is composed of a relatively small intracellular domain, a transmembrane domain, and a larger extracellular component containing a cystine-rich region, 16 EGF-like repeats, a DSL domain, and a signal peptide (PMID: 15358557; 26548814). It is widely expressed throughout mammalian development, across many tissues and developmental stages (PMID: 26548814). The Jagged1-NOTCH interaction can trigger the Notch signaling and activate transcription factors that play key roles in cell differentiation and morphogenesis.
