Background Information

CD86 (also known as B7.2) is a costimulatory molecule belonging to the immunoglobulin superfamily. Primarily expressed on antigen-presenting cells (APCs), including B cells, dendritic cells, and macrophages, CD86 is the ligand for two proteins at the cell surface of T cells, CD28 antigen and cytotoxic T-lymphocyte-associated protein 4. Binding of CD86 with CD28 antigen is a costimulatory signal for activation of the T-cell. Binding of CD86 with cytotoxic T-lymphocyte-associated protein 4 negatively regulates T-cell activation and diminishes the immune response.

Selected Validation Data

1X10⁶ human PBMCs were surface stained with CL405 Anti-Human CD14 and 5 ul CoraLite® Plus 647 Anti-Human CD86 (CL647-65165, Clone:BU63), or Mouse IgG1 Isotype Control. Cells were not fixed. Monocytes were gated.
