Background Information

The integrins are a superfamily of cell adhesion receptors that bind to extracellular matrix ligands, cell-surface ligands, and soluble ligands (PMID: 17543136). They are transmembrane $\alpha\beta$ heterodimers and at least 24 distinct integrin heterodimers are formed by the combination of 18 α and eight β known subunits (PMID: 17543136; 20029421). In addition to mediating cell adhesion, integrins also play important roles in modulating signal transduction pathways that control cellular responses including migration, proliferation, differentiation, and apoptosis (PMID:19118207). Integrin alpha-IIb (ITGA2B, CD41) is expressed on platelets, megakaryocytes and some hematopoietic progenitor cells (PMID: 11934866).

Selected Validation Data

100 ul human platelet-rich plasma (diluted 1:2 with PBS) was surface stained with 5 ul CoraLite® Plus 750 Anti-Human CD41a (CL750-65173, Clone:HIP8) or CoraLite® Plus 750 Mouse IgG1 Isotype Control (CL750-65124). Cells were not fixed.
