| Background Information | Ly-6G (lymphocyte antigen 6 complex, locus G), also known as Gr-1, is a $21-25 \mathrm{kDa}$, glycosylphosphatidylinositolanchored protein expressed on myeloid lineage cells in mouse bone marrow (PMID: 8360469). The expression of Ly6G increases on neutrophils as they differentiate from immature cells in the bone marrow to mature cells in the blood and spleen (PMID: 8890901). Antibodies targeting Ly6G (RB6-8C5 or 1A8) are commonly used in studies aimed at identifying the role of neutrophils (PMID: 23543767). The RB6-8C 5 mAb has been reported to cross-react with Ly6C on cells expressing Ly-6C (PMID: 8360469). |  |  |  |

| Notable Publications | Author | Pubmed ID | Journal | Application |
|  | Xiaolong He | 34721415 | Front Immunol | FC |
|  | Ting Liang | 37743226 | Adv Sci (Weinh) | FC |

$\overline{\text { Storage }}$
Storage:
Store at $2-8^{\circ} \mathrm{C}$. Avoid exposure to light. Stable for one year after shipment.
Storage Buffer:
PBS with $0.09 \%$ sodium azide.

[^0]This product is exclusively available under Proteintech Group brand and is not available to purchase from any other manufacturer.

Selected Validation Data

$1 \times 10^{\wedge} 6$ mouse bone marrow cells were surface stained with 0.5 ug FITC Plus Anti-Mouse Ly-6G/Ly6C (Gr-1) (FITC-65140, Clone: RB6-8C5) or 0.5 ug isotype control. Cells were not fixed.
