|                   |   | Applications                                       | Tested Applications:<br>WB<br>Species Specificity:   | Positive Controls:<br>WB : HeLa cells, HepG2 cells           |  |
|                   |   | Background Information                             | human, mouse, rat<br>Lamins are components of the nuclear lamina, a fibrous layer on the nucleoplasmic side of the inner nuclear<br>membrane, which is thought to provide a framework for the nuclear envelope and may also interact with chromatin.<br>The nuclear lamina consists of a two-dimensional matrix of proteins located next to the inner nuclear membrane.<br>The lamin family of proteins make up the matrix and are highly conserved in evolution. During mitosis, the lamina<br>matrix is reversibly disassembled as the lamin proteins are phosphorylated. Vertebrate lamins consist of two types,<br>A and B. This gene encodes one of the two B type proteins, B1. Expression of uncleavable mutant lamin A or B caused<br>significant delays in the onset of chromatin condensation and nuclear shrinkage during apoptosis (PMID:11953316).<br>This protein is not suitable for samples where the nuclear envelope has been removed. |  |  |
|                   |   |  |  |  |  |
| Storage           | Storage:<br>Store at -20°C. Avoid exposure to ligh<br>Storage Buffer:<br>PBS with 50% Glycerol, 0.05% Proclir                             |  | ent.   |  |  |
|                   | Aliquoting is unnecessary for -20 $^\circ$ C s  | torage   |  |  |  |

## Selected Validation Data

Various lysates were subjected to SDS PAGE followed by western blot with HRP-80906 (Lamin B1 antibody) at dilution of 1:8000 incubated at room temperature for 1.5 hours.
