

HumanKine[®] Thrombopoietin (Recombinant Human)

Animal Component-Free

Human cell expressed

Tag-Free

Endotoxin Free

Product Description

Animal-free Recombinant Human Thrombopoietin is expressed from human 293 cells as a monomeric glycoprotein with an apparent molecular mass of 80 to 85 kDa. This cytokine is produced in a serum-free, chemically defined media. Production in human 293 cells offers authentic glycosylation, contributing to stability in cell growth media and other applications. C- terminal domain glycosylation is thought to be important for the secretion of Thrombopoietin from cells and for survival of Thrombopoietin in the circulation.

Alternative Names

MGDF, MKCSF, ML, MPLLG, THPO, Thrombopoietin

Source

Human Embryonic Kidney cells (HEK293). HEK293-derived Thrombopoietin protein
