# Human PD-L1 Sandwich ELISA Kit Datasheet 

Please read it entirely before use
Catalogue Number: KE00074
Size: 96T
Sensitivity: $0.04 \mathrm{ng} / \mathrm{mL}$
Range: $\quad 0.156-10 \mathrm{ng} / \mathrm{mL}$
Usage: For the quantitative detection of human PD-L1 concentrations in serum, plasma, cell culture supernatant and cell lysate.

This product is for research use only and not for use in human or animal therapeutic or diagnostic.

## 1. Background

PD-L1 (programmed cell death ligand 1, also known as CD274 or B7-H1) is a 290 aa type I transmembrane protein. PD-L1 is expressed constitutively on T cells, B cells, DCs, macrophages, mesenchymal stem cells and cultured bone marrow-derived mast cells. In addition, PD-L1 is also expressed on many nonhematopoietic cell types, including vascular endothelial cells, epithelial cells, muscle cells, hepatocytes, pancreatic islet cells, astrocytes in the brain, placental syncytiotrophoblasts, and cells in cornea, iris-ciliary body and retina of eye. PD-L1 is frequently upregulated in a wide variety of solid tumors, including melanoma, ovarian, lung, glioblastoma, breast, and pancreatic cancers. PD-L1 and PD-L2 are two ligands of PD-1. Engagement of PD-1 by PDL1 or PD-L2 transduces a signal that inhibits T-cell proliferation, cytokine production, and cytolytic function. It is critical for the regulation of T cell function during tolerance, autoimmunity and infection. Besides the membrane-bound form, PD-L1 can also exist as a soluble form (sPD-L1) generated either by proteolytic cleavage of membrane-bound form or by translation of alternative spliced mRNA.

## 2. Principle

## Sandwich ELISA structure (HRP conjugated secondary antibody)

A capture antibody is pre-coated onto the bottom of wells which binds to analyte of interest. A detection antibody also binds to the analyte. Horseradish peroxidase (HRP)-conjugated secondary antibody binds to the detection antibody. TMB acts as the HRP substrate and the solution color will change from colorless to blue. A stop solution containing sulfuric acid turns solution yellow. The color intensity is proportional to the quantity of bound protein which is measurable at 450 nm with the correction wavelength set at 630 nm .

## 3. Required Materials

3.1 A microplate reader capable of measuring absorbance at 450 nm with the correction wavelength set at 630 nm .
3.2 Calibrated, adjustable precision pipettes and disposable plastic tips. A manifold multi-channel pipette is recommended for large assays.
3.3 Plate washer: automated or manual.
3.4 Absorbent paper towels.
3.5 Glass or plastic tubes to prepare standard and sample dilutions.
3.6 Beakers and graduated cylinders.
3.7 Log-log or semi-log graph paper or computer and software for ELISA data analysis. A four-parameter logistic (4-PL) curve-fit is recommended.

## 4. Kit Components and Storage

| Microplate - antibody coated 96-well microplate (8 well $\times 12$ strips) | 1 plate | Unopened Kit: <br> Store at $2-8^{\circ} \mathrm{C}$ for 6 months or - |
| :---: | :---: | :---: |
| Protein standard - $20 \mathrm{ng} / \mathrm{bottle}$; lyophilized | 2 bottles |  |
| Detection antibody ( $100 \times$ ) - $120 \mu \mathrm{~L} / \mathrm{via}$ * | 1 vial |  |
| HRP-conjugated antibody (100×) - $120 \mu \mathrm{~L} / \mathrm{vial*}$ | 1 vial | $20^{\circ} \mathrm{C}$ for 12 months. |
| Sample Diluent PT 1-ef - $30 \mathrm{~mL} /$ bottle. For cell culture supernatant sample | 1 bottle | Opened Kit: |
| Sample Diluent PT 3-ef - $30 \mathrm{~mL} /$ bottle. For human serum, plasma and cell lysate samples | 1 bottle | All reagents stored at $2-8^{\circ} \mathrm{C}$ for 7 days. |
| Detection Diluent - $30 \mathrm{~mL} / \mathrm{bottle}$ | 1 bottle |  |
| Wash Buffer Concentrate (20x) - $30 \mathrm{~mL} / \mathrm{bottle}$ | 1 bottle |  |
| Extraction Reagent - $30 \mathrm{~mL} / \mathrm{bottle}$ | 1 bottle | for each assay. |
| Tetramethylbenzidine Substrate (TMB) - $12 \mathrm{~mL} / \mathrm{bottle}$ | 1 bottle |  |
| Stop Solution - $12 \mathrm{~mL} / \mathrm{bottle}$ | 1 bottle |  |
| Plate Cover Seals | 4 pieces |  |

* Centrifugation immediately before use

## 5. Safety Notes

5.1 Avoid any skin and eye contact with Stop Solution and TMB. In case of contact, wash thoroughly with water.
5.2 Do not use the kit after the expiration date.
5.3 Do not mix or substitute reagents or materials from other kit lots or other sources.
5.4 Be sure to wear protective equipment such as gloves, masks and goggles during the experiment.
5.5 When using an automated plate washer, adding a 30 second soak period following the addition of Wash Buffer to improve assay precision

## 6. Sample Collection and Storage

6.1 Serum: Allow blood samples to clot for 30 minutes, followed by centrifugation for 15 minutes at $1000 \times \mathrm{xg}$. Clear serum can be assayed immediately or aliquoted and stored at $-20^{\circ} \mathrm{C}$. Avoid repeated freeze-thaw cycles.
6.2 Plasma: Use EDTA, heparin, or citrate as an anticoagulant for plasma collection. Centrifuge for 15 minutes at 1000xg within 30 minutes of collection. The plasma can be assayed immediately or aliquoted and stored at $-20^{\circ} \mathrm{C}$. Avoid repeated freeze-thaw cycles.
6.3 Cell Culture Supernatant: Remove particulates by centrifugation for 5 minutes at 500 xg and assay immediately or aliquot and store samples at $\leq-20^{\circ} \mathrm{C}$. Avoid repeated freeze-thaw cycles.
6.4 Cell Lysate:

1) Collect cells and wash by centrifuging at 500 xg for 5 minutes before resuspension in pre-cooled PBS buffer. Perform this step three times.
2) Count cells and then discard the supernatant.
3) Add protease inhibitor cocktail to the Extraction Reagent to a final concentration immediately prior to performing cell lysis.
4) Add 1 mL of Extraction reagent (containing protease inhibitor cocktail) Per $1 \times 107$ cells, Incubate cell suspension on ice for 30 minutes, use ultrasound to treat the samples.
5) Centrifuge cell lysate at $10,000 \mathrm{xg}$ for 5 minutes at $4^{\circ} \mathrm{C}$.
6) Measure the concentration of total protein in cell lysate using BCA assay. Where possible, keep samples on ice to avoid protein degradation.

## 7. Regent Preparation

7.1 Wash Buffer ( 1 X ): If crystals have formed in the concentrate, warm to room temperature and mix gently until the crystals have completely dissolved. Add 30 mL of Wash Buffer Concentrate(20X) to 570 mL deionized or distilled water to prepare 1 K Wash Buffer.
7.2 Detection Antibody (1X): Dilute 100X Detection Antibody 1:100 using Detection Diluent prior to assay. Suggested 1:100 dilution: $10 \mu \mathrm{~L}$ 100 Detection Antibody $+990 \mu \mathrm{~L}$ Detection Diluent (Centrifuge the 100 X Detection Antibody solution for a few seconds prior to use).
7.3 HRP-conjugated antibody (1X): Dilute 100X HRP-conjugated antibody 1:100 using Detection Diluent prior to assay. Suggested 1:100 dilution: $10 \mu \mathrm{~L}$ 100 K HRP-conjugated antibody $+990 \mu$ L Detection Diluent (Centrifuge the 100K HRPconjugated antibodyy solution for a few seconds prior to use).
7.4 Sample Dilution: Different samples should be diluted with corresponding Sample Diluent, samples may require further dilution if the readout values are higher than the highest standard OD reading. Variations in sample collection, processing and storage may affect the results of the measurement.

Recommended Dilution for different sample types: 1:2 or 1:4 is recommended for human serum and plasma; 1:2 or 1:4 is recommended for cell culture supernatant; 1:2 or 1:4 is recommended for cell lysate.

### 7.5 Standard Serial Dilution:

For human serum, plasma and cell lysate samples, add 2 mL Sample Diluent PT 3-ef in protein standard; For cell culture supernatant samples, add 2 mL Sample Diluent PT 1-ef in protein standard.

| Add \# $\mu \mathrm{L}$ of Standard <br> diluted in the previous <br> step | - | $500 \mu \mathrm{~L}$ | $500 \mu \mathrm{~L}$ | $500 \mu \mathrm{~L}$ | $500 \mu \mathrm{~L}$ | $500 \mu \mathrm{~L}$ | $500 \mu \mathrm{~L}$ |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| \# $\mu \mathrm{L}$ of Sample Diluent <br> PT 1-ef or PT 3-ef | $2000 \mu \mathrm{~L}$ | $500 \mu \mathrm{~L}$ | $500 \mu \mathrm{~L}$ | $500 \mu \mathrm{~L}$ | $500 \mu \mathrm{~L}$ | $500 \mu \mathrm{~L}$ | $500 \mu \mathrm{~L}$ |

## 8. Assay Procedure Summary

Bring all reagents to room temperature before use (Detection antibody and HRP-conjugated antibody can be used immediately). To avoid cross-contamination, change pipette tips between additions of each standard level, between sample additions, and between reagent additions. Also, use separate reservoirs for each reagent.
8.1 Take out the required number of microplate strips and return excess strips to the foil pouch containing the drying reagent pack and reseal; store at $4^{\circ} \mathrm{C}$ immediately. Microplate strips should be used in one week.
8.2 Preset the layout of the microplate, including control group, standard group and sample group, add $100 \mu \mathrm{~L}$ of each standard and sample to the appropriate wells.(Make sure sample addition is uninterrupted and completed within 5 to 10 minutes, It is recommended to assay all standards, controls, and samples in duplicate).
8.3 Seal plate with cover seal, pressing it firmly onto top of microwells. Incubate the plate for 1 hour at $37^{\circ} \mathrm{C}$.
8.4 Wash

1) Gently remove the cover seal. Discard the liquid from wells by aspirating or decanting. Remove any residual solution by tapping the plate a few times on fresh paper towels.
2) Wash 4 times with 1 X Wash Buffer, using at least $350-400 \mu \mathrm{~L}$ per well. Following the last wash, firmly tap plates on fresh towels 10 times to remove residual Wash Buffer. Avoid getting any towel fibers in the wells or wells drying out completely. 8.5 Add $100 \mu \mathrm{~L}$ of 1 X Detection Antibody solution (refer to Reagent Preparation7.2) to each well. Seal plate with cover seal and incubate for 1 hour at $37^{\circ} \mathrm{C}$.
8.6 Repeat wash step in 8.4.
8.7 Add $100 \mu \mathrm{~L}$ of 1 K HRP-conjugated antibody solution (refer to Reagent Preparation7.3) to each well. Seal plate with cover seal and incubate the plate for 40 minutes at $37^{\circ} \mathrm{C}$.
8.8 Repeat wash step in 8.4.
8.9 Signal development: Add $100 \mu \mathrm{~L}$ of TMB substrate solution to each well, protected from light. Incubate for 15 to 20 minutes. Substrate Solution should remain colorless until added to the plate.
8.10 Quenching color development: Add $100 \mu \mathrm{~L}$ of Stop Solution to each well in the same order as addition of the TMB substrate. Mix by tapping the side of the plate gently. NB: Avoid skin and eye contact with the Stop solution.
8.11 Read results: Immediately after adding Stop solution read the absorbance on a microplate reader at a wavelength of 450 nm . If possible, perform a double wavelength readout ( 450 nm and 630 nm ).
8.12 Data analysis: Calculate the average of the duplicate readings (OD value) for each standard and sample, and subtract the average of the zero standard absorbance. Construct a standard curve by plotting the mean absorbance for each standard on the $y$-axis against the concentration on the $x$-axis, use four-parameter logistic curve- fit (4-PL) analysis to do this. If the samples have been diluted, the OD readout from the standard curve must be multiplied by the dilution factor used.

| Step | Reagent | Volume | Incubation | Wash | Notes |
| :---: | :--- | :--- | :--- | :--- | :--- |
| 1 | Standard and Samples | $100 \mu \mathrm{~L}$ | 60 min | 4 times | Cover Wells incubate at $37^{\circ} \mathrm{C}$ |
| 2 | Diluent Antibody Solution | $100 \mu \mathrm{~L}$ | 60 min | 4 times | Cover Wells incubate at $37^{\circ} \mathrm{C}$ |
| 3 | Diluent HRP Solution | $100 \mu \mathrm{~L}$ | 40 min | 4 times | Cover Wells incubate at $37^{\circ} \mathrm{C}$ |
| 4 | TMB Substrate | $100 \mu \mathrm{~L}$ | $15-20 \mathrm{~min}$ | Do not wash | Incubate in the dark at $37^{\circ} \mathrm{C}$ |
| 5 | Stop Solution | $100 \mu \mathrm{~L}$ | 0 min | Do not wash | - |
| 6 | Read plate at 450 nm and 630 nm immediately after adding Stop solution. DO NOT exceed 5 minutes. |  |  |  |  |

## 9. Validation Data

### 9.1 Standard curve

These standard curves are provided for demonstration only. A standard curve should be generated for each set of samples assayed.

| (ng/mL) | O.D | Average | Corrected |
| :---: | :---: | :---: | :---: |
| 0 | 0.02 <br> 0.024 | 0.022 | - |
| 0.156 | 0.072 <br> 0.069 | 0.0705 | 0.0485 |
| 0.313 | 0.123 <br> 0.119 | 0.121 | 0.099 |
| 0.625 | 0.242 <br> 0.232 | 0.237 | 0.215 |
| 1.25 | 0.466 <br> 0.444 | 0.455 | 0.433 |
| 2.5 | 0.851 <br> 0.824 | 0.8375 | 0.8155 |
| 5 | 1.49 <br> 1.422 | 1.456 | 1.434 |
| 10 | 2.117 <br> 2.084 | 2.1005 | 2.0785 |

| (ng/mL) | O.D | Average | Corrected |
| :---: | :---: | :---: | :---: |
| 0 | 0.025 <br> 0.023 | 0.024 | - |
| 0.156 | 0.096 <br> 0.091 | 0.0935 | 0.0695 |
| 0.313 | 0.167 <br> 0.16 | 0.1635 | 0.1395 |
| 0.625 | 0.275 <br> 0.304 | 0.2895 | 0.2655 |
| 1.25 | 0.524 <br> 0.536 | 0.53 | 0.506 |
| 2.5 | 0.969 <br> 0.906 | 0.9375 | 0.9135 |
| 5 | 1.604 <br> 1.514 | 1.559 | 1.535 |
| 10 | 2.267 <br> 2.188 | 2.2275 | 2.2035 |

### 9.2 Precision

Intra-assay Precision (Precision within an assay) Three samples of known concentration were tested 20 times on one plate to assess intra-assay precision.

Inter-assay Precision (Precision between assays) Three samples of known concentration were tested in 24 separate assays to assess inter-assay precision.

| Intra-assay Precision |  |  |  |  |
| :---: | :---: | :---: | :---: | :---: |
| Sample | n | Mean (ng/mL) | SD | CV\% |
| 1 | 20 | 8.26 | 0.64 | 7.8 |
| 2 | 20 | 2.02 | 0.14 | 6.8 |
| 3 | 20 | 0.49 | 0.02 | 4.6 |

| Inter-assay Precision |  |  |  |  |
| :---: | :---: | :---: | :---: | :---: |
| Sample | n | Mean (ng/mL) | SD | CV\% |
| 1 | 24 | 7.43 | 0.38 | 5.1 |
| 2 | 24 | 1.90 | 0.12 | 6.1 |
| 3 | 24 | 0.47 | 0.03 | 7.0 |

### 9.3 Recovery

The recovery of human PD-L1 spiked to three different levels throughout the range of the assay in various matrices was evaluated.

| Sample Type |  | Average\% of Expected | Range (\%) |
| :--- | :--- | :--- | :--- |
|  | $1: 2$ | 92 | $74-125$ |
|  | $1: 4$ | 95 | $75-120$ |
| Cell culture supernatant | $1: 2$ | 108 | $95-127$ |
|  | $1: 4$ | 102 | $87-127$ |
| Cell lysate | $1: 2$ | 102 | $79-126$ |
|  | $1: 4$ | 98 | $74-116$ |

### 9.4 Sample values

Sixty-four human serum and plasma samples from healthy volunteers were evaluated for human PD-L1 in this assay. Sixty samples measured less than the lowest standard, $0.156 \mathrm{ng} / \mathrm{mL}$. Four samples measured between $0.25 \mathrm{and} 2 \mathrm{ng} / \mathrm{mL}$. No medical histories were available for the donors used in this study.

| Sample Type | Concentration (ng/mL) |
| :--- | :--- |
| Jurkat cell lysate $\left(1 \times 10^{7}\right.$ cell) | 1.6 |

### 9.5 Sensitivity

The minimum detectable dose of human PD-L1 is $0.04 \mathrm{ng} / \mathrm{mL}$. This was determined by adding two standard deviations to the concentration corresponding to the mean O.D. of 20 zero standard replicates.

### 9.6 Linearity

To assess the linearity of the assay, three samples were spiked with high concentrations of human PD-L1 in various matrices and diluted with the appropriate Sample Diluent to produce samples with values within the dynamic range of the assay.
(The samples were initially diluted 1:4)

| $1: 2$ |  | Human plasma <br> (Sample Diluent PT 3-ef) | Cell culture supernatant <br> (Sample Diluent PT 1-ef) | Cell lysate <br> (Sample Diluent PT 3-ef) |
| :--- | :--- | :--- | :--- | :--- |
|  | Average\% of Expected | 79 | 108 | 94 |
|  | Range (\%) | $76-82$ | $91-124$ | $79-109$ |
| $1: 4$ | Average\% of Expected | 86 | 110 | 101 |
|  | Range (\%) | $78-95$ | $98-127$ | $86-116$ |
| $1: 8$ | Average\% of Expected | 84 | 107 | 100 |
|  | Range (\%) | $75-97$ | $96-121$ | $86-114$ |
| $1: 16$ | Average\% of Expected | 94 | 108 | 101 |
|  | Range (\%) | $86-106$ | $100-120$ | $91-110$ |
