Background

Platelet derived endothelial cell growth factor (PD-ECGF), also known as thymidine phosphorylase (TYMP), induces migration and angiogenesis in endothelial and tumor cells, and was upregulated in various malignancies compared to that in normal tissues. Interestingly, PD-ECGF has dual effect on tumor development and chemotherapy. It could stimulate cancer cell migration and proliferation. On the other hand, some chemotherapeutic agents (5-fluorouracil, capecitabine, etc.) were converted to their active forms through TP enzymes.

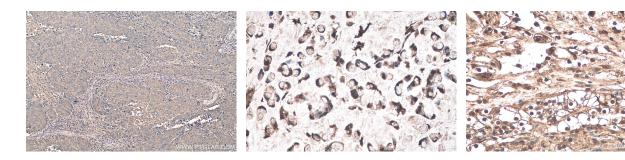

Synonyms

ECGF1, Gliostatin, hPD ECGF, MNGIE, PD ECGF, PDECGF, PD-ECGF, TdRPase, thymidine phosphorylase, TP, TYMP
