Background

Rad17, a component of the checkpoint clamp loader complex (RAD17/RFC), was originally initially identified as a DNA damage checkpoint protein. Rad17 participates in cell cycle control and DNA damage repair. Rad17 phosphorylation by ATR (ataxia telangiectasia mutated and Rad3-related) kinase is indispensable for the recruitment of Claspin and the activation of Chk1 in response to genotoxic stress.

Synonyms

CCYC, HRAD17, R24L, RAD17, RAD17 homolog (S. pombe), RAD17SP, RAD24, RF C/activator 1 homolog
