Background

MAD2L1BP, also named as CMT2 and KIAA0110, belongs to the MAD2L1BP family. It may function to silence the spindle checkpoint and allow mitosis to proceed through anaphase by binding MAD2L1 after it has become dissociated from the MAD2L1-CDC20 complex. MAD2L1BP interacts with the spindle checkpoint and coordinates cell cycle events in late mitosis. MAD2L1BP may play an active role to remove MAD2 from p55CDC and tether MAD2 for silencing the checkpoint.
