Background

RNF34 is an E3 ubiquitin ligase that regulates protein substrates by post-translational modification. It is associated with regulating postsynaptic γ 2-GABAAR clustering and GABAergic synaptic innervation in hippocampal neurons, indicating the importance of RNF34 in regulating neurological function. It is preferentially expressed in esophageal, gastric, and colorectal cancers, suggesting a possible association between RNF34 and the development of digestive tract cancers.

Synonyms

CARP 1, CARP-1, Caspase regulator CARP1, Caspases-8 and -10-associated RING finger protein 1, E3 ubiquitin-protein ligase RNF34
