## Background

SIPA1 (Signal-induced proliferation-associated protein 1) is also named as SPA1, p130 SPA-1 and GTPase-activating protein Spa-1. SIPA1, a GTPase activating protein, was discovered in proliferating lymphocytes as mitogen-induced nuclear protein. SIPA1 promotes catalyzation of hydrolyze Rap1GTP/GDP and is known to be a negative regulator of Ras-related protein, which transduces the signals for various cellular functions, including development, cellular proliferation, and cellular adhesion. Transcription of fibronectin 1, which is crucial for cell junction and migration of triple-negative breast cancer (TNBC) cells, was regulated by SIPA1 in a DBR-dependent manner. SIPA1 was highly expressed in metastatic TNBC. SIPA1 served as a TF, promoting TNBC migration, invasion, and metastasis.

## Synonyms

GTPase-activating protein Spa-1, p130 SPA 1, p130 SPA-1, Signal-induced proliferation-associated protein 1, Sipa 1
