#### Background

SMARCD1 belongs to the nuclear SWI/SNF chromatin remodeling complex, which regulates transcription and interacts with nucleolin in the nucleus. In addition, it's a member of the neural progenitors-specific chromatin remodeling complex (npBAF complex) and the neuron-specific chromatin remodeling complex (nBAF complex). It possesses a SWIB domain which is homologous to and shares a common fold with the p53-binding domain of MDM2, a cell cycle regulator which interacts with NPM1. SMARCD1 has a strong influence on the Vitamin D-mediated transcriptional activity from an enhancer Vitamin D receptor element (VDRE). And it can mediates critical interactions between nuclear receptors and the BRG1/SMARCA4 chromatin-remodeling complex for transactivation.
