## Background

RPRD1A is upregulated in cells overexpressing cyclin-dependent kinase inhibitor p15(INK4b) and may have a role in cell cycle regulation. It contains a RAR domain that is involved in regulation of nuclear pre-mRNA, which suggests that P15RS may act as a nuclear regulation protein. It also interacts with phosphorylated C-terminal heptapeptide repeat domain (CTD) of the largest RNA polymerase II subunit POLR2A, and participates in dephosphorylation of the CTD. Besides, RPRD1A regulates cell cycle genes and attenuates WNT signaling and acts as a negative regulator of cyclin-D1 (CCND1) and cyclin-E (CCNE1) in the cell cycle.

## Synonyms

RPRD1A, Cyclin-dependent kinase inhibitor 2B-related protein, HsT3101, p15INK4B related protein, p15INK4B-related protein
